

**Postdoc position** 12/05/2008

Research field: Functional genomics of Neural Stem Cells

Postdoc position is available in Prof. Angelo Vescovi's group at the Department of Biotechnology, University of Milano-Bicocca, Milano

The project, which is funded by EU grant, focuses on studying the plasticity of murine and human Neural Stem Cells (NSCs), in particular identification of genetic and regulatory modules that determine cell multi/pluripotency. Our group has a longstanding expertise in isolating, culturing, cloning and expanding NSCs and provides an excellent infrastructure for biomedical research.

The applicant should have a PhD in Biomedical Sciences or related subjects and a good expertise in a broad range of cell biology, molecular biology and biochemical techniques. A strong interest in stem cell research coupled with creativity, technical independence and experience in project/grant management is desirable. Salary is based on experience and seniority.

To apply for this position please send a CV and a covering letter by email to: [zarovni.natasa@unimib.it](mailto:zarovni.natasa@unimib.it) and [vescovi@stemgen.it](mailto:vescovi@stemgen.it)
